

The Business Forms Solutions You Need Today

The Business Forms Solutions You Need Today

Datamark Systems is one of Canada's most experienced business forms manufacturers. We deliver a full range of customized forms and form/label combinations, backed by the knowledge and expertise to satisfy the most demanding design and product construction requirements.

Our product capabilities include roll products, continuous, laser cut sheet and unit set business forms – both one-part and multi-part – as well as solutions for marketing campaigns and mailers. Through our high-speed variable print capability, we can personalize documents or add specialized numbering or bar coding. Manufacturing facilities in Quebec, Ontario, Manitoba and Alberta provide both local service and national capabilities.

Product Capabilities

Laser Cut Sheet Forms

- Single laser sheet → Multi-part
- Form/label combination

Unit Set Forms

- One-part → Multi-part → Multi-part form/label combination → Multi-part form/envelope combination

Continuous Forms

- Jumbo rolls → Point of sale rolls
- Fan fold → One-part → Multi-part

Industry Sectors

- Aeronautical and Parts
- Agrifood
- Automobile and Parts
- Chemicals and Petroleum
- Furniture
- Lumber
- Metallurgy
- Personal Care
- Paper Manufacturing
- Retailing
- Telecommunications and Electronics
- Textiles and Apparel
- Travel & Transportation

Laser Cut Sheet

Laser printing technological evolution and equipment capabilities require precise expertise if you wish to get the maximum out of your cut sheet applications. Datamark Systems can provide such expertise, and together with design enhancing features, deliver a fully functional information document, negotiable or marketing oriented, in paper or label versions.

Unit Sets

Conveying information inside and outside your organization is often done more efficiently using a versatile single or multi-part unit set document. This type of construction will lend itself to efficient manual or mechanical information recording and support all conventional and advanced business form printing features.

Continuous

There are still a good number of impact printing applications requiring continuous forms printing expertise: Our design and product engineering resources will help you define the product you need, whether it calls for features such as bar coding, MICR imprinting, OCR readability, fraud protection, variable imaging, or any number of specialty constructions, such as form and label combination or mailer pocket gluing.

Product Engineering

Our recognized product engineering know-how and successful track record in developing innovative solutions are key benefits for our customers. Datamark Systems consultants understand the importance of paper-based forms in your business processes and the importance of electronic data capture. Their knowledge and experience will help you optimize the design of your forms and form/label combinations.

Our specialists listen carefully to your needs and discuss all aspects of your project from visual appearance to the information appearing on the form. Their recommended solution will incorporate all of the required features to make your business document perform exactly as specified. This includes the selection of paper stock and manufacturing method that will minimize your total product costs.

Manufacturing

We have skilled manufacturing teams and a wide range of equipment, including many specialized presses that are very efficient for specific purposes. The attention to quality in our facilities is driven by the pride and passion of our people and reinforced by rigorous ISO 9002 and ISO 9001 procedures. We are also proud to hold the "Preferred Converter" designation

from 3M and certifications from Underwriters Laboratories (UL) and the Canadian Standards Association (CSA).

For every project, we choose the most appropriate technology to achieve the best result in terms of product quality and cost effectiveness. We stand by every product we manufacture.

Integrated Document Solutions

We offer a full range of services, from design and printing to complete document management, including warehousing, customized reporting, inventory financing and distribution – across Canada or around the world.

We also offer a full range of value added services such as product/process re-engineering. And we have the know-how and technology to provide a broad range of value-added features such as variable imaging/personalization, bar coding and document security.
